Notes

- 1 Burner capacities listed for elevations up to 2,000 feet. For higher elevations, consult local Weil-McLain distributor/agent or sales office.
- 2 Oil ratings based on No. 2 fuel oil with heating value of 140,000 Btu per gallon.
- 3 Boiler-burner unit to be adjusted to achieve + 0.1 inches W.C. pressure at flue collar, resulting in positive pressure in firebox as listed.
- 4 R8184G combustion safety control uses a cadmium sulfide cell flame detector to monitor oil flame, provides intermittent direct spark ignition of oil flame and manual lockout switch.

Notes

- 5 All motors furnished with integral overload protection with manual reset.
- 6 CF500-W and CF800-W burners are furnished for on-off operation only. CF1400-W and CF2300A-W burners are furnished with mechanical pressure atomizing oil control system with on-off operation, low fire start, high fire run and two-position air control as standard. Low-high-low fire operation can be obtained by addition of SPST temperature or pressure controller.
- 7 Settings shown are for initial start-up. Final settings should be determined after combustion readings.
- 8 120/60/1 control circuit is used for all burners.
